Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claims 1 –23 are objected to because method claims require steps for enablement to one of ordinary skill in the art.. Appropriate correction required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 – 4, 17, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Berkel et al. (US Patent 5349174).
4. Van Berkel et al. teach a method of fabricating a MIM capacitor comprising depositing a transparent dielectric (13) between transparent lower (7A) and upper (7B) electrodes, and a transparent passivating layer (14) formed on the upper electrode (col. 9 lines 31 – 47). By inherency of their transparency, these layers do not require alignment marks for patterning.
5. Claims 17, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Ring (US Patent 6475889).

Art Unit: 2825

6. Ring teach a method of fabricating a thin film resistor comprising depositing an ITO layer to eliminate a mask alignment process (col. 7 lines 53 – col. 8 line 15).

7. Claims 5 – 7, 19 –20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim, any intervening claims, and acceptable method's claims format.

8. Claims 8 – 16, and 21 – 23 are allowable if presented in method's claims format.

Remarks

9. Applicant's arguments filed July 2, 2004 have been fully considered but they are not persuasive. Van Berkel et al. teach upper and lower transparent electrodes buried in a transparent media, as such by inherency there is no need for alignment marks to pattern the electrode contacts. This action is non-final.
